

Rambabu Vadlamudi — EB-1A Extraordinary Ability Petition

Petitioner: Rambabu Vadlamudi

Classification: EB-1A (Extraordinary Ability in Science/Business)

Company: Ardia Health Labs (Argyle, TX 76226)

Date Prepared: June 2026

About Rambabu Vadlamudi

Rambabu Vadlamudi is the Founder & Enterprise Architect of Ardia Health Labs, a Delaware LLC incorporated January 2026 and headquartered in Argyle, TX. He is the inventor of the **DGP (Deterministic-Generative-Predictive) Clinical Revenue Architecture** — a proprietary three-layer AI system built to recover denied clinical laboratory claims with zero hallucination on policy interpretation.

- **Total IT Experience:** 15+ years
 - **Healthcare IT Experience:** 8+ years
 - **Prior Employers:** Alsac (St. Jude Children's Research Hospital), CIGNA, Medifast, Teladoc Health, United Health Care, ECFMG
 - **Domain Expertise:** FHIR R4, HL7 v2, EDI 835/837, clinical data pipelines, enterprise architecture, GCP
 - **Contact:** ram.vadlamudi@ardiahealthlabs.com | (469) 679-3334
-

EB-1A Criteria Status (Need 3 of 10)

Criterion	Status	Strongest Evidence
C1 — Awards/Prizes	⚠ In Progress	Apply: Fast Company, DFW Innovation Awards
C2 — Membership	⚠ In Progress	Apply: HIMSS Fellow, AMIA, Forbes Tech Council
C3 — Press Coverage	⚠ In Progress	Pitch: Becker's, MedCity News, STAT News
C4 — Judging	⚠ Action Required	Email: JAMIA peer reviewer, NIH SBIR study section
C5 — Original Contributions	✅ STRONG	DGP Architecture white paper + pitch deck
C6 — Scholarly Publications	⚠ Action Required	Submit Paper 1 to arXiv THIS WEEK

Criterion	Status	Strongest Evidence
C8 — Leading Role	✓ STRONG	Founder & Enterprise Architect, Ardia Health Labs

Recommended filing strategy: Lead with C5 + C8 (both strong now), add C6 after arXiv submission, build C4 via JAMIA peer review.

Contents of This Repository

Papers (for EB-1A Criterion 6 — Scholarly Publications)

- papers/paper1_dgp_architecture.md — Full draft: DGP Architecture paper (submit arXiv cs.AI)
- papers/paper2_lab_revenue_crisis.md — Full draft: Independent Lab Revenue Crisis systematic review
- papers/paper3_ai_governance_sb1188.md — Full draft: AI Governance under TX SB 1188 + TRAIGA

Citations

- citations/reference_library.md — 11 sources in NLM, APA, and Chicago formats

Visa Evidence

- visa_evidence/eb1a_criteria_map.md — Evidence mapped to each EB-1A criterion with priority actions
- visa_evidence/expert_witness_letter_templates.md — Two letter templates for expert witnesses

Submission Guides

- submission_guides/arxiv_submission_guide.md — Step-by-step arXiv preprint submission
-

Priority Action Timeline

Week	Action	Impact
This week	Submit Paper 1 abstract to arXiv cs.AI	Satisfies C6 immediately
This week	Email editor@jamia.org — volunteer as peer reviewer	Starts C4
2 weeks	Apply Forbes Technology Council	C2 membership
4 weeks	Pitch Becker's Hospital Review on PAMA 2027	C3 press

Week	Action	Impact
	angle	
4 weeks	Apply HIMSS + AMIA membership	C2 membership
6 weeks	Submit Paper 2 to arXiv	Strengthens C6
Q4 2026	Paper 5 (pilot results) after lab pilot launch	Strongest C6 evidence

The DGP Architecture — Core Contribution

Inventor: Rambabu Vadlamudi | **Domain:** Healthcare Revenue Cycle Management (RCM)

Note: “Neuro-symbolic” is an extensively published academic term with prior art in diagnosis and clinical decision support. The DGP architecture is Ram’s original coinage, differentiated by domain (administrative RCM, not clinical diagnosis) and specific implementation.

Layer 1 — Deterministic Policy Engine - 847 rules covering all LCD/NCD/MolDX policies - DEX Z-codes, CPT 81400-81479 series, PLA codes - Zero hallucinations on policy interpretation

Layer 2 — Generative Clinical Reasoning - LLM (Anthropic Claude API) - Appeal briefs generated in <90 seconds - Retrieves evidence from 14 medical databases in 340ms

Layer 3 — Predictive Denial Prevention - ML model trained on historical EDI 835 claims data - Pre-submission denial risk scoring

What makes it original: All prior hybrid AI healthcare architecture papers address clinical DIAGNOSIS. DGP applies the three-layer design to healthcare ADMINISTRATIVE automation (claim denial recovery) under MolDX/LCD/NCD/DEX Z-code compliance — a domain with no prior published work of this kind.
